

Huntington Grinding Wheel Dressers

Widely used in shops and foundries, Huntington-type grinding wheel dressers consist of star shaped cutters and spacers made of heat-treated high-carbon steel. These cutters spin when applied against a rotating grinding wheel to re-true and clean its surface. When properly used, a Huntington Dresser can extend the life and dramatically increase the efficiency of a grinding wheel. Made in America, Kut-Rite Huntington tools are sturdily built and very well-balanced. Powder coated safety orange, they're easy to find in a shop environment and the handles have a better look and feel.
